### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 20-27 and 29-34 are rejected under 35 U.S.C. 102(b) as being anticipated by Chandley et al (US 5,069,271).

As to claims 20, 21, 25, 26, and 34, Chandley et al disclose a casting system comprising a pressure casting apparatus having an inlet sprue and a die cavity, and a mold assembly (30) to fit within the die cavity (73), the mold assembly including a housing including an interior volume and a opening through a wall of the housing, a refractory shell mold disposed within the interior volume of the housing, the refractory shell mold having an internal mold cavity and an inlet port that communicates with the opening in the housing and mates with the inlet sprue, and a supporting material (60) substantially filling a volume between an external surface of the refractory shell mold and the housing (figure 4).

As to claims 22, 29, 30, 31, and 32, Chandley et al disclose refractory material being alumina-based.

Art Unit: 1725

As to claims 23, 24, and 33, the mold assembly is capable of accepting molten metal alloy such as lead, bismuth, or antimony.

As to claim 27, the housing is formed of steel (col. 7, line 33).

*Allowable Subject Matter*

3. Claim 28 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The prior arts of record fails to teach a gap of no more than 0.3 mm exists between all corresponding surfaces of the housing and the die cavity.
